

# What is Wastewater Treatment?

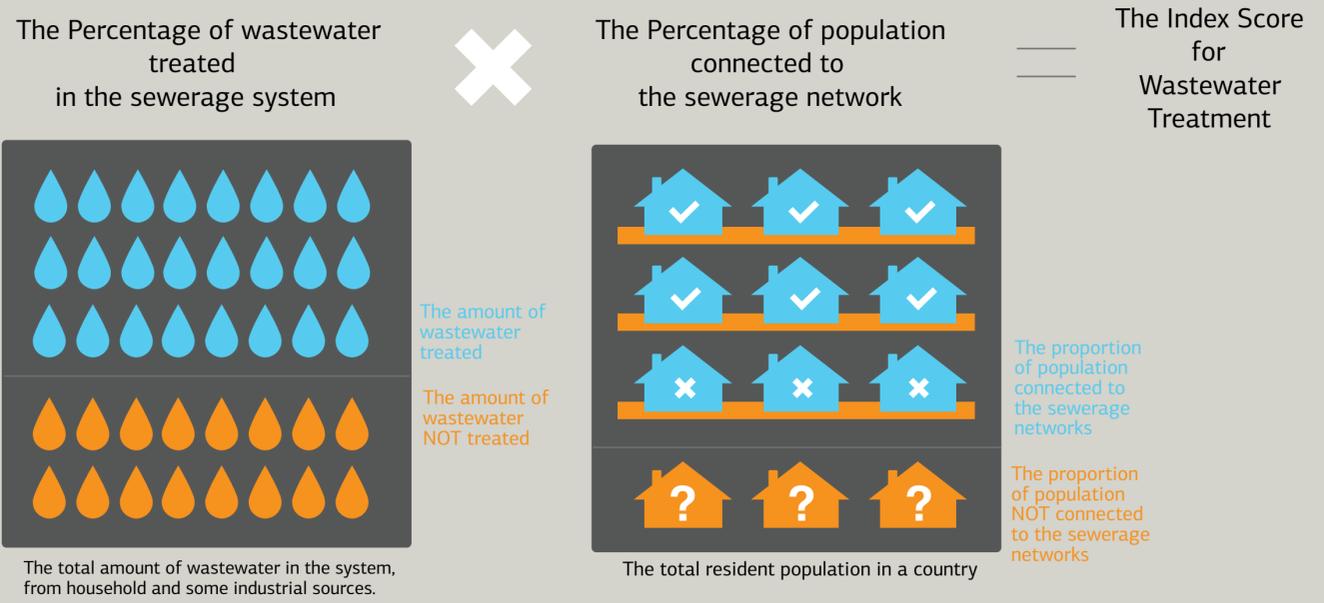

## Primary Treatment and beyond

There are different levels of wastewater treatment. We consider the definition "at least the primary treatment," which removes a lot of suspended solids and reduces biological oxygen demand. Extra steps may be taken to treat the water further.

# How do we calculate it?

# Why do we want your feedback?

Our first-of-its-kind wastewater treatment indicator has its limitations, including its spatial and temporal coverage, inconsistent terminology, and methods among various data sources. That's why we're turning to you.

## What are we looking for exactly?

Help us by checking out your country — or any country you may be familiar with. Is the data consistent with your experiences or knowledge? Is it incomplete? Is the data source valid or problematic?
